What's new in Drupal 7 Theming

Marek Sotak

@sotak

Core themes massacre

They are no longer with us*

- Bluemarine
- Pushbutton
- Chameleon

* they live in contrib

FYI Garland survived

New kids on the block

Stark

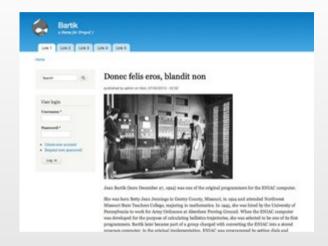

- for demonstration purposes
- a troubleshooting tool
- using default HTML markup
- simple layout.css

New kids on the block

Bartik

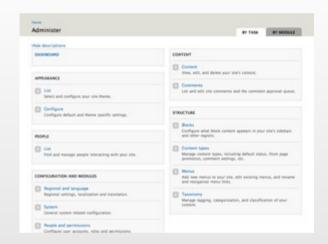

- Default D7 theme
- recolorable
- many regions
- Designed for content

New kids on the block

Seven

- administration theme
- result of D7UX
- designed by
 Mark Boulton & Leisa Reichelt

Little big changes

CSS

- .clear-block → .clearfix
- new classes for accessibility
 - .element-hidden
 - .element-invisible
- default.css merged with system.css
- new stylesheet system-behavior.css
- conditional stylesheets

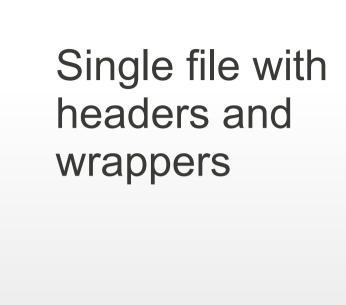

```
function garland_preprocess_html(&$vars) {
   drupal_add_css(path_to_theme() . '/fix-ie.css', array('weight' =>
   CSS_THEME, 'browsers' => array('IE' => 'lt IE 7', '!IE' => FALSE),
   'preprocess' => FALSE));
}
```

Theme anatomy

.info

No automatic loading for: scripts.js styles.css

html.tpl.php

html.tpl.php

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML+RDFa 1.0//EN"</pre>
  "http://www.w3.org/MarkUp/DTD/xhtml-rdfa-1.dtd">
<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="<?php print</pre>
$language->language; ?>" version="XHTML+RDFa 1.0" dir="<?php print</pre>
$language->dir; ?>"<?php print $rdf namespaces; ?>>
<head profile="<?php print $grdd<del>| prof</del>
  <?php print $head; ?>
                                     Common $classes variable that is being
  <title><?php print $head title;
                                       used everywhere, $attributes as well
  <?php print $styles; ?>
  <?php print $scripts; ?>
</head>
<body class="<?php print $classes; ?>" <?php print $attributes;?>>
  <div id="skip-link">
    <a href="#main-content"><?php print t('Skip to main content');
?></a>
  </div>
  <?php print $page_top; ?>
                                       New region $page_top (scope)
  <?php print $page; ?>
                                         Rendered page in $page
  <?php print $page bottom; ?>
                                      $page_bottom replacing $closure
</body>
</html>
```

page.tpl.php

No headers

\$missions variable removed

- → regions[highlighted] = Highlighted
- \$footer_message variable removed
- → regions[footer] = Footer
- \$content no longer as output
 - → region and is required

hidden regions

- \$page_top, \$page_bottom
- custom hidden region needs to be specified in .info:

```
regions[indicators] = Indicators
regions_hidden[] = indicators
```

- Not displayed in blocks UI
- Modules adds blocks directly into these regions

sidebars

- \$left region → \$sidebar_first
- \$right → \$sidebar_second

help

\$help → region

region.tpl.php

blocks

Meaningful classes

- block-user-0 → block-user-login
- block-search-0 → block-search-form

New blocks

- \$search_box → block
- \$content → block
- \$help → block

blocks

blocks.tpl.php

```
<div id="<?php print $block html id; ?>" class="<?php
print $classes; ?>"<?php print $attributes; ?>>
  <?php print render($title prefix); ?>
<?php if ($block->subject): ?>
  <h2<?php print $title attributes; ?>><?php print</pre>
$block->subject ?></h2>
<?php endif;?>
  <?php print render($title suffix); ?>
  <div class="content"<?php print $content attributes;
>>>
    <?php print $content ?>
 </div>
</div>
```

rendering

New delivery callback drupal_render

- render()
- hide()
- show()

process & preprocess

- after preprocess we have post processing function
- both functions available for tpl.php and for theme functions

```
function bartik_process_html(&$variables) {
    // Hook into color.module.
    if (module_exists('color')) {
        color_html_alter($variables);
    }
}
```

hook_alter

We can use _alter hooks in template.php

- hook_form_alter
- hook css alter
- hook_xxx_alter
- hook_page_alter

hook_page_alter

• demo

PHPtemplate suggestions

- node-%.tpl.php
- node-edit.tpl.php, etc...
- No need to have node.tpl.php in your theme
- Using two dashes
- node--article.tpl.php
- page--frontpage.tpl.php

worth mentioning

- Primary and secondary links are now Main and Secondary menu
- All theme() functions now take a single argument, \$variables
- new suggestions, specific menu items
 - THEMENAME_menu_link__MENU_NAME()
 - THEMENAME_menu_tree__MENU_NAME()
